

Re-Programming 3M C760 and C960 Headsets

It is necessary for you to re-program your repaired headsets to match the base station frequency in your store. Re-programming instructions are easy to follow:

- 1) Plug the programming cable into the base station. The programming cable on the C960 model is about 3' long with a modular connector on one end and a flat 4-pin connector on the other end. The C760 model has modular connectors on both ends.
- 2) With the unit turned ON, plug the cable into the unit's programming port.
- 3) You should hear a two-tone warble sound.
- 4) Unplug the cable from the headset and your unit will be ready for use.
- 5) Repeat steps 1-4 for additional repaired units.
